

TIDES, HORTON BLUFF, Minas Basin, N.S., for APRIL 2009

A Graphic Guide for High & Low Tide Times, Tide Range and Sunrise/Sunset

Predictions are for Horton Bluff (near Avonport, N.S.) and are computer generated using the tidal harmonic tables for Burntcoat Head, N.S. These times are a good guide (± 15 min or less) for most locations around the **Minas Basin**. Adjustments were made relative to observations recorded at Horton Bluff. Results compare favourably with values obtained using the *Canadian Tide and Current Tables, 2009* on Saint John, N.B. References for astronomical events: *Observer's Handbook 2009* Royal Astronomical Society of Canada and *Starry Night*, a sky simulation program by Sienna Software, Toronto, Ont. This chart **not** designed for navigating at sea.

The INTERNATIONAL YEAR of ASTRONOMY (IYA 2009)

S Y M B O T S & N O T E S	<ul style="list-style-type: none"> High Tide, Moon near Meridian above south High Tide, Moon near Anti-meridian below north Low Tide, Moon near Western horizon -setting Low Tide, Moon near Eastern horizon -rising 	<ul style="list-style-type: none"> NM -New Moon FM -Full Moon P =Perigee: Moon nearest Earth (370 013 km) LQ -Last Quarter Moon FQ -First Quarter Moon A =Apogee: Moon farthest from Earth (404 232 km) Datum = lowest point below which the tide seldom falls. 	<ul style="list-style-type: none"> Factors which increase the vertical range of tide, especially when perigee is close to New or Full Moon [SPRING TIDES] Note: Weather conditions can significantly affect tide range. Factors which decrease the vertical range of tide, especially when apogee is close to Quarter Moon [NEAP TIDES] 	
	<ul style="list-style-type: none"> Moon's Declination to the Equator N -Maximum declination North: $+28^\circ + 27^\circ$ E -Declination is 0° (on the Equator) S -Maximum declination South: $- 27^\circ$ 	<ul style="list-style-type: none"> ☀ Sunrise / Sunset Daylight gains about 67 min) + Tidal Bore arrives at the bridge, Mantua, Hants Co. 		

To get the predicted tide time or height, select a date, follow the vertical line to the event, read time(hours) or height (metres) along the horizontal line to the scale on the left.
