EXHAUST MANIFOLDS

Includes exhaust flange bolts, nuts and washers.

64-67 6 cylinder owners wishing to improve performance can run a 68-73 exhaust manifold which has a larger port and a more free flowing design. This in conjunction with a larger diameter exhaust pipe and muffler, is the same principle as adding dual exhaust to a V8.

HIGH PERFORMANCE 6 CYLINDER HEADER

The 200, 250 are a reliable and economical engines, they offer little in performance. A properly modified 6 cyl. will put out as much usable low R.P.M. horsepower as a V8. The Single outlet is recommended especially if no other modifications will be made. Dual outlets work best with Hi-Po camshaft, 2V Carb., and Pertronix ignitor. Either header will improve horsepower and economy. Does not include an exhaust port Divider part# C3OZ9430EPD which smooths out air flow between the #3 and #4 Cylinder.

SHEETMETAL

Our sheet metal products are reproductions from overseas and the USA. We have used all the pieces and found the fit and quality acceptable. If you are not satisfied we will accept returns that have not been altered and are in the original packing but you will have to pay return shipping. Please state right or left where applicable. Sheet metal parts may have scratches or minor dents which are normally corrected during installation and painting. We do not consider these pieces flawed for minor cosmetic flaws. Fenders, hoods and quarter panels are shipped as oversized and extra shipping will be charged.

**STEERING****STEERING BOXES**

These all new boxes feature a quick 16:1 ratio for a very responsive and precise steering system, improved needle bearing design for a smoother operation, direct bolt in, no modifications required, anti vibration collar on 1964-1966 boxes, no core. The 16:1 ratio is the same ratio used on all high performance mustangs (GT, "k" car, Shelby, Mach 1 and Boxx models.) Power steering cars also feature the 16:1 ratio. Most of these boxes are worn out after 30 plus years of service. These new boxes eliminate play in steering wheel, hesitation excellent upgrade for regular production Mustangs with manual steering that have the slower 19:1 ratio. Cars with 16:1 requires 3 3/4 turns of the steering wheel lock to lock while 19:1 ratio require 4 5/8 turns to lock.

NOTE: When ordering 1967 steering box please confirm tag on original box, as there were a few boxes available and they do not interchange.

INTAKE MANIFOLD - HI PO ALUMINUM

These high quality manifolds are available in a satin finish or a polished finish. These high performance aluminum intake manifolds deliver excellent all around performance. This dual plane 180 degree high rise design delivers outstanding performance across nearly the entire powerband. Optimum power from 1500 to 6500 RPM retains good bottom end power and throttle response. They are precision die cast in steel dies rather than sand molds. Each manifold is subjected to a thorough pressure test to assure a trouble free installation. EXTRA features include mounting kit to ease installation, rear water crossover to aid in cooling, to extra NPT ports, crossover intake runners for more balanced length and nitrous bosses. Dyno tests have proven that this manifold equals or outperforms the equivalent top rated brands.

IGNITOR II

The ignitor II take the ignitor a step further by adding a powerful new microcontroller, that controls the dwell period, for the best possible spark over the entire RPM range. Ignitor II offers enhanced performance levels only found in more expensive "box type" ignition systems. Compared to point type systems ignitor II develops on average 4 times more available energy between 3,000 and 5,000 RPM, and 2 times more available plug voltage. Higher RPM performance is improved when used with the flame-thrower II super low resistance 45,000 volt coil.

IGN12612	64-73 6 cyl.	215.25
IGN12812	64-73 8 cyl.	215.25

FLAME-THROWER II

With it's uper low 0.6 ohm resistance, this new coil is not only perfect for the new ignitor II but can benefit virtually any distributor type system. Ther lower resistance and improved trun ratio produces the higher volts needed to run larger spark plug gaps for added power and better fuel economy.

PERTRONIX SPARK PLUG WIRE SETS

Low resistnace, high performance wire sets feature two current paths. One path is spiral wound stainless steel alloy and the other is a carbon impregnated fiberglass center core. Other features include low 500 ohm per foot resistance. Silicone jackets used to resist high temperatures, moisture, oil and chemicals. EPDM rubber inner insulation for superior heat reistance and pervention of arching and voltage leaks. Fiberglass reinforcing braid for added strenght and flexibility. Aavailable in red, blue and black.

**FOG LAMP WIRING****1964-1965 WARNING LIGHT**

Originally on 1964 & 1965 cars with warning lights, fog lamps weren't available. Subsequently, these wiring harnesses are not set up for factory fog lamps. These cars require (C5ZZ15223FUD fog lamp wiring conversion kit and C6ZZ15A214A fog lamp switch) for installation of original style fog lamps.

1965 G.T. & PONY INTERIOR CARS

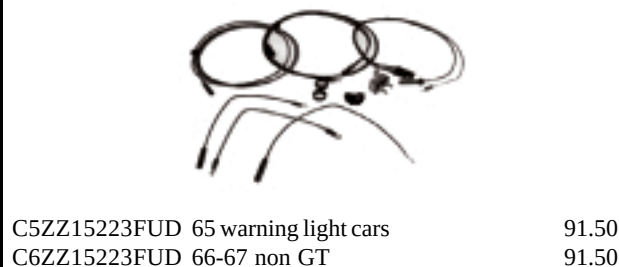

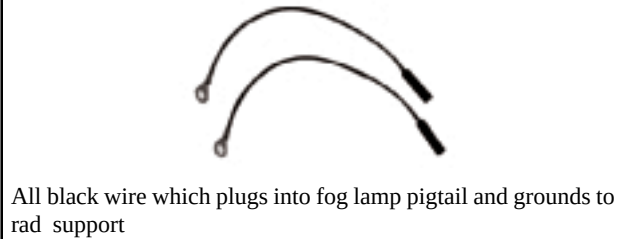

Late 1965 cars equipped with G.T. or Pony interior options already have most fog lamp wiring built into the headlamp and under dash harnesses. These cars will only need (C5ZZ15A214A fog lamp switch & C5ZZ15223CB circuit breaker) for installation.

1966-1967 NON G.T. CARS

All 1966 & 1967 non G.T. cars require (C6ZZ15223FUD fog lamp wiring conversion kit & C6ZZ15A214A fog lamp switch) for proper installation.

FOG LIGHT WIRING KITS

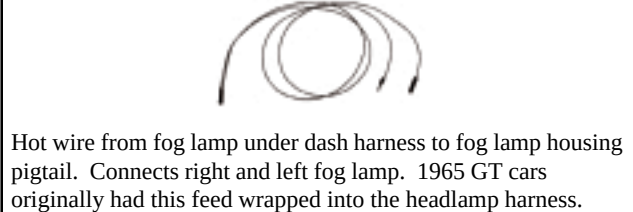

Early 65 cars and non GT or Pony cars require a conversion kit to operate fog lights. This includes under dash harness, circuit breaker, primary lead, fog light feed wire, 2 ground wires, 2 rad support grommets, wiring diagram and installation instructions. Does not include fog light switch.
